

Legionella Risk Assessment

Inspection, analysis, prevention

The owners of large receptive structures are responsible for any episode of legionellosis detected on the guests. To guarantee the safety of the people visiting the facilities and the tranquility of the owners, Gelt International proposes its expertise to offer a complete service that fully complies with Italian law, but at the same time combines the European Guidelines and English standards, renowned for being the excellence in the field of Legionella Prevention.

Our "complete service" includes a prevention approach, but also a prompt Action Plan in case of contamination of the structure, so to avoid problems for guests. We help you to avoid potential consequences for guests' health, but also damage to your brand and economic losses.

● BUILDING INSPECTION

Inspection of the structure and any video-inspection in order to identify the critical points and the parts subject to the risk of Legionella proliferation, as well as any corrosion.

● LEGIONELLA RISK ASSESSMENT

Document that quantifies the risk of legionellosis for each part of the facility's structure, based on internationally recognized probability and damage factors.

● PREVENTION OPERATING PROTOCOL

Operational tool that identifies actions to prevent the growth of Legionella (who does what where and when) based on the inspection and the Risk Assessment.

● MONITORING PLAN AND ANALYSIS

Implementation of the Monitoring Plan with the sampling and analysis of water collected at the Critical Control Points identified in the Risk Assessment document.

● LEGIONELLA PREVENTION MANAGER

Head of Legionella Prevention, a competent director who verifies the correct and timely implementation of the actions described in the Prevention Protocol.

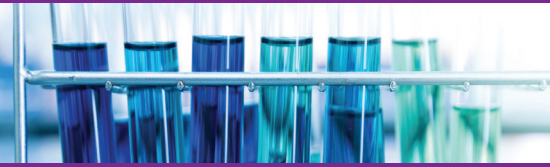

● TRAINING OF YOUR STAFF

Training courses for your internal staff and any external subcontractors who is responsible for the implementing the Legionella Prevention Protocol.

Water

Inspection, analysis, prevention

Our everyday contribution to WATER

Our water management, chemistry and microbiology experts serve our customers with the following services:

1. Legionella Risk Assessment
2. Water prevention and monitoring plans
3. Water Safety Plan
4. Hygienic Risk Assessment
5. Chemical and microbiological analysis of drinking water, water for dialysis, waste water, SPA water, groundwater, swimming pools and treated water
6. Verification of compliance of materials in contact with water
7. Verification of the effectiveness of sanitizing products and their compatibility with contact materials
8. Verification of possible corrosion of materials
